**April 2008**

# INTRODUCTION

This is a catalog of all of the files maintained in the Keystone MacCentral Software Library. The Library can be obtained on CD by request. The library requires three CDs. Normally we will provide two complete CDs with the latest files. These will be programs that require OS X or in some cases Classic. Please specify if you require the complete library.

## DOMs

Disks Of the Month are arbitrary collections of files. They have been downloaded from the Net. The web sites are included in the documentation so that you may download directly from the source.

## ROMs

In September of 1998, we featured MacMAME as our Disk Of the Month (DOM 98/09.) In a nutshell, MacMAME attempts to emulate as closely as possible the original hardware of the early eighties arcade games. It does this by fooling the original program code, contained in ROM chips, into thinking they are running inside the real machine when in reality they are running on your Mac.

MAME, which stands for Multi-Arcade Machine Emulator, is the product of a group of people who have teamed up to emulate as many of these games as possible. This is a list of the games that we have in our library in the DOM 98/09 folder.

## SOUND BYTES

This portion of our catalog lists the names of the various sound bytes, that we have in our library. The five folders are arranged by type of sound.
